

Five Research-Supported Strategies for Students with Disabilities

EDCO 202 (Winthrop University)

Positive reinforcement is a means of identifying and teaching a specific behavior to students with the intention of seeing an increase in the desired behavior.

Task analysis is the process of breaking a skill down into smaller, more manageable components. Once a **task analysis** is complete, it can be used to teach students a skill that is too challenging to teach all at once.

Explicit instruction involves teaching a specific concept or procedure in a highly structured and carefully sequenced manner.

Model	I do it.	My turn.
Prompt	We do it.	Let's do this together.
Check	You do it.	Your turn.

Self-management involves the self-monitoring one's own behavior and independently completing tasks. For example, a checklist can help students develop their self-management skills.

Visual support is a communicational tool to enhance communication by using visual aids such as pictures, drawings, videos, charts etc.

THANK YOU
